PRACTICE

🟢 Scenario 1 – Suspicious Software (Malware)

✔️ Incident Report (Expected Points)

Type: Malware Infection

Description: Installed untrusted software → system slowdown, pop-ups, auto programs

Impact: System performance degraded, security compromised

Action Taken: Scan system, uninstall software, isolate system

Recommendations: Avoid unknown downloads, install antivirus

✔ Playbook (Expected Steps)

1. Identify unusual behavior

2. Disconnect system from network

3. Run antivirus scan

4. Remove malicious software

5. Update system security

6. Educate user

🟢 Scenario 2 – Email Attachment (Malware)

✔ Incident Report

Type: Malware

Clue: “.exe” file disguised as PDF

Impact: File loss, high CPU usage

Action: Scan + delete file + isolate system

✔ Playbook

1. Identify suspicious attachment

2. Isolate system

3. Scan and remove malware

4. Restore files (if backup)

5. Awareness about email threats

🟢 Scenario 3 – USB Malware

✔ Incident Report

Type: Malware

Impact: File corruption, virus spread

Action: Remove USB, scan system

✔ Playbook

1. Disconnect USB

2. Isolate infected system

3. Run antivirus scan

4. Remove threats

5. Disable autorun for USB

---

🔴 Scenario 4 – File Encryption (Ransomware)

✔ Incident Report

Type: Ransomware

Clue: Encrypted files + ransom message

Impact: Data inaccessible

Action: Disconnect system, inform IT

✔ Playbook

1. Identify ransomware signs

2. Disconnect network

3. Do NOT pay ransom

4. Restore from backup

5. Patch vulnerabilities

---

🔴 Scenario 5 – Hospital Attack (Ransomware)

✔ Incident Report

Type: Ransomware

Impact: Critical system failure

Action: Isolate systems, emergency response

✔ Playbook

1. Isolate affected systems

2. Inform authorities

3. Activate backup systems

4. Restore data

5. Strengthen security

---

🔴 Scenario 6 – Backup Compromise (Ransomware)

✔ Incident Report

Type: Ransomware

Impact: Data + backup loss

Action: Isolate network, investigate

✔ Playbook

1. Disconnect systems

2. Identify infection source

3. Use offline backups

4. Remove malware

5. Improve backup security

---

🟠 Scenario 7 – Brute Force (Password Attack)

✔ Incident Report

Type: Password Attack

Clue: Multiple login attempts

Impact: Unauthorized access

Action: Reset password

✔ Playbook

1. Detect login attempts

2. Lock account

3. Reset password

4. Enable 2FA

5. Monitor activity

---

🟠 Scenario 8 – Weak Password

✔ Incident Report

Type: Password Attack

Impact: Account misuse

Action: Change password

✔ Playbook

1. Identify compromised account

2. Reset password

3. Enable strong password policy

4. Enable 2FA

5. User awareness

---

🔵 Scenario 9 – Website Traffic Flood (DoS)

✔️ Incident Report

Type: DoS Attack

Clue: High traffic → website crash

Impact: Service unavailable

Action: Block traffic

✔ Playbook

1. Identify abnormal traffic

2. Block suspicious IPs

3. Use firewall

4. Apply rate limiting

5. Monitor traffic

---

🔵 Scenario 10 – Server Overload (DoS)

✔️ Incident Report

Type: DoS Attack

Impact: Server downtime

Action: Filter traffic

✔ Playbook

1. Detect repeated requests

2. Block malicious sources

3. Use load balancer

4. Strengthen firewall

5. Continuous monitoring

Bas itna hi likh na hai incident report aur playbook mai.
